

Phase II Environmental Site Assessment

**10 Scarlett Road
Toronto, Ontario**

City of Toronto

March 14, 2023

→ **The Power of Commitment**

Executive Summary

GHD Limited (GHD) was retained by the City of Toronto (the City) to complete a Phase II Environmental Site Assessment (ESA) for a property municipally known as 10 Scarlett Road in Toronto, Ontario (hereafter referred to as the Property or Site). The Site is currently in use for commercial purposes (a floral and event design business) and residential purposes. GHD understands that the Phase II ESA was completed for due diligence purposes to support the City's expropriation of the Site was part of the Scarlett Road Bridge Reconstruction project. The City plans to demolish the building at the Site and utilize the property as future road right-of-way.

The Site is approximately 214.3 square metres in size and is occupied by a two-storey building with a footprint of approximately 150 square metres. The building is currently leased for commercial purposes (a floral and event design business) on the ground level, with the second storey currently utilized as residential space. The exterior of the Property is asphalt-paved; with a small garden area on the east side of the building where it fronts onto Scarlett Road. The Site is located in the southwestern portion of Toronto (former borough of York), Ontario that is utilized for mixed residential, commercial and industrial land use; and is surrounded by the following:

- North:** The Site is bounded to the north by Bernice Crescent, and further north by various residential and commercial properties (Upholstery business and a Rogers Communications building).
- East:** The Site is bounded to the east by Scarlett Road, further east of which is Sun Convenience (Convenience Store) and Messina Bakery.
- South:** The Site is bounded to the south by a building occupied by Athletic Knit Wear, further south of which is St. Clair Avenue West.
- West:** The Site is bounded to the west by residential properties.

A Phase I ESA was completed by GHD at the Site and is dated February 24, 2022. Based on GHDs observations during the Phase I ESA, the ground floor tenant of the on-Site building utilizes the space for marketing, minor office administrative works, storage of flora and workshop areas for creating floral arrangements. Based on a review of historical records and information provided by the Site owner, the two-storey building was constructed in 1951 and the main floor was historically occupied by James Signs from the early 1950s until approximately 2017. Historical operations at the Site included administration, design, manufacturing, painting, and printing of a variety of custom signs. The second storey of the building has been utilized for residential and/or office purposes since the early 1950s.

Based on the findings of the Phase I ESA, the following areas of actual or potential Site contamination were identified to be associated with the Site:

- i) **Historical Site Use:** Based on discussions with the Site owner, James Signs occupied the main floor of the building from the early 1950s until around 2017. Operations at the Site included administration, design, manufacturing, painting and printing of a variety of custom signs. Releases, if any, associated with the historical sign manufacturer on the Site represents a potential impact to the soil and groundwater quality at the Site with respect to volatile organic compounds and metals.
- ii) **Historical Land Use:** Review of the 1963 FIP's indicate that Dominion Gasket & Manufacturing Co. Ltd. (Dominion) formerly occupied the adjacent southwest property. Based on the information provided in the plan; Dominion's operations included gasket stamping and curing, plastic hose manufacturing and cork splitting. An oil storage area affiliated with Dominion was located near the northeast corner of the Dominion property, in close proximity to the Site. This property was also identified in the waste generator listing under Bernard Athletic Knit & Enterprises Limited as a generator of paint/pigment/coating residues, aliphatic solvents, petroleum distillates; as well as waste oils and lubricant wastes between 2006 and 2018; and polychlorinated biphenyl (PCB) wastes in

2018. Releases, if any, associated with the historical manufacturing operations on the adjacent property to the southwest represent a potential impact to groundwater quality at the Site with respect to metals, petroleum hydrocarbons, volatile organic compounds and PCBs.

- iii) **Historical Gasoline Underground Storage Tanks:** Review of the 1930 FIP's indicated that two 500-litre gasoline underground storage tanks (USTs) were located approximately 40 metres north of the Site. Releases, if any, associated with the former operation of gasoline USTs to the north of the Site represent a potential impact to groundwater quality at the Site with respect to petroleum hydrocarbons and lead.

The Phase II ESA was completed in general accordance with the document entitled, "CSA Standard Z769-00 (R2018), *Phase II Environmental Site Assessment*" for conducting environmental assessments. The Phase II ESA included the advancement of two (2) boreholes, one (1) of which was instrumented as an overburden monitoring well, to facilitate the collection of soil and groundwater samples. Soil samples were submitted for laboratory analysis of one or more of the following parameters: volatile organic compounds (VOCs); petroleum hydrocarbon (PHC) fractions 1 to 4 (F1-F4); benzene, toluene, ethylbenzene, and xylenes (collectively referred to as BTEX); polycyclic aromatic hydrocarbons (PAHs); polychlorinated biphenyls (PCBs); and metal/inorganics.

Based on the proposed future use of the Site as a road right-of-way (community use), the soil analytical results were assessed to the following Ministry of Environment, Conservation and Parks (MECP) standards:

- Table 3: Full Depth Generic Site Condition Standards in a Non-Potable Ground Water Condition for Industrial/Commercial/Community Property Use and coarse textured soils (herein referred to as the Table 3 Standards).

Based on the findings of the Site investigation activities undertaken by GHD, the following summary and conclusions are provided:

- The general stratigraphy at the Site consists of asphalt overlying a sand fill; underlain by native soils (primarily sand with a deep clay layer) to the maximum investigated depth of 11.58 metres (m) below ground surface (BGS).
- Groundwater was not encountered during the field investigative activities and, as such, groundwater direction flow at the Site could not be determined as part of the Phase II ESA. However, based on topography of the area, groundwater flow at the Site is anticipated to be in a southwesterly direction towards the Humber River.
- Based on the soil analytical results, the analyzed parameters were either not detected at the associated laboratory reporting limit or had concentrations that were below the applicable Table 3 Standards.
- Groundwater was not encountered during the field investigative activities and as such, groundwater samples were not collected or submitted for laboratory analysis as part of the Phase II ESA.

1. Introduction

GHD Limited (GHD) was retained by the City of Toronto (the City) to complete a Phase II Environmental Site Assessment (ESA) for a property municipally known as 10 Scarlett Road in Toronto, Ontario (hereafter referred to as the Property or Site). The Site is currently in use for commercial purposes (a floral and event design business) and residential purposes. GHD understands that the Phase II ESA was completed for due diligence purposes to support the City's expropriation of the Site was part of the Scarlett Road Bridge Reconstruction project. The Site location map is provided on **Figure 1**. The Site Plan is presented on **Figure 2**. The City plans to demolish the building at the Site and utilize the property as future road right-of-way.

Based on the findings of a Phase I ESA¹ completed by GHD in February 2023, the following areas of actual or potential Site contamination were identified to be associated with the Site:

- i) **Historical Site Use:** Based on discussions with the current Site owner, James Signs occupied the main floor of the building from the early 1950s until around 2017. Operations at the Site included administration, design, manufacturing, painting and printing of a variety of custom signs. Releases, if any, associated with the historical sign manufacturer on the Site represents a potential impact to the soil and groundwater quality at the Site with respect to volatile organic compounds and metals.
- ii) **Historical Land Use:** Review of the 1963 FIP's indicate that Dominion Gasket & Manufacturing Co. Ltd. (Dominion) formerly occupied the adjacent southwest property. Based on the information provided in the plan; Dominion's operations included gasket stamping and curing, plastic hose manufacturing and cork splitting. An oil storage area affiliated with Dominion was located near the northeast corner of the Dominion property, in close proximity to the Site. This property was also identified in the waste generator listing under Bernard Athletic Knit & Enterprises Limited as a generator of paint/pigment/coating residues, aliphatic solvents, petroleum distillates; as well as waste oils and lubricant wastes between 2006 and 2018; and polychlorinated biphenyl (PCB) wastes in 2018. Releases, if any, associated with the historical manufacturing operations on the adjacent property to the southwest represent a potential impact to groundwater quality at the Site with respect to metals, petroleum hydrocarbons, volatile organic compounds and PCBs.
- iii) **Historical Gasoline Underground Storage Tanks:** Review of the 1930 FIP's indicated that two 500-litre gasoline underground storage tanks (USTs) were located approximately 40 metres north of the Site. Releases, if any, associated with the former operation of gasoline USTs to the north of the Site represent a potential impact to groundwater quality at the Site with respect to petroleum hydrocarbons and lead.

The objective of the Phase II ESA was to investigate soil and groundwater quality at the Property.

The Phase II ESA was completed in general accordance with the requirements outlined in the document entitled "CSA Z769-00 (R2018), *Phase II Environmental Site Assessment*" for conducting environmental site assessments. Although a Record of Site Condition (RSC) is not required, the field methodology and data collection generally followed the requirements of Ontario Regulation (O. Reg.) 153/04.

¹ "Phase I Environmental Site Assessment, 10 Scarlett Road, Toronto, Ontario "; prepared by GHD; prepared for The City of Toronto; dated February 24, 2023 (herein referred to as Phase I ESA).

2. Background

2.1 Site Description

The Site is approximately 214.3 square metres in size and is occupied by a two-storey building with a footprint of approximately 150 square metres. The building is currently leased for commercial purposes (a floral and event design business) on the ground level, and the second storey is currently utilized as residential space. The Site is located in the southwestern portion of York, Ontario that is utilized for mixed residential, commercial and industrial land use. The exterior of the Property is asphalt-paved; with a small garden area on the east side of the building where it fronts onto Scarlett Road. A Site Plan is presented on **Figure 2**.

Based on GHDs observations during the Phase I ESA, the ground floor tenant of the on-Site building utilizes the space for marketing, minor office administrative works, storage of flora and workshop areas for creating floral arrangements. Based on a review of historical records and information provided by the Site owner, the two-storey building was constructed in 1951 and the main floor was historically occupied by James Signs from the early 1950s until approximately 2017. Historical operations at the Site included administration, design, manufacturing, painting, and printing of a variety of custom signs. The second storey of the building has been utilized for residential and/or office purposes since the early 1950s.

2.2 Site Geology and Hydrogeology

The elevation of the Site is approximately 122 metres above mean sea level (mAMSL)². Regional topography slopes downward to the south towards Lake Ontario.

The Site is located in the broad physiographic region known as the Sand Plains³. The surficial geology consists of coarse-textured glaciolacustrine deposits consisting of sand, gravel, minor silt and clay. Beneath the overburden deposits is bedrock consisting of shale, limestone, dolostone, and siltstone of the Georgian Bay Formation, Blue Mountain Formation, Billings Formation, Collingwood Member, and Eastview Member⁴. The thickness of the overburden deposits varies due to surficial topographic relief, but is on the order of approximately 38 metres in the vicinity of the Site when comparing overburden and bedrock topography in the area⁵. The mapping is consistent with the soils that were encountered during the Phase II ESA drilling activities, which were predominantly native gravelly sand/sand underlain by clay. Bedrock was not encountered during drilling activities.

The closest water body to the Site is the Humber River, which is located approximately 600 m to the southwest of the Site. Based on local topography, groundwater is inferred to flow in a southwesterly direction towards the Humber River.

2.3 Adjacent and Neighbouring Properties

The Site is located in the southwestern portion of York, Ontario that is utilized for mixed residential, commercial and industrial land use; and is surrounded by the following:

² Natural Resources Canada [map]. "The Atlas of Canada - Toporama", governed by version 2.3 of the Open Government License – Canada. November 27, 2020. <http://atlas.gc.ca/toporama/en/index.html>.

⁴ "Bedrock Geology of Ontario" [map]. Scale 1:250,000. OGS Earth Geoscience Data [computer files]. Sudbury, Ontario: Ontario Geological Survey & Ministry of Northern Development and Mines, 2010.

⁵ Miller, R.F., Farrell, Lorraine and Karrow, P.F., 1979. Bedrock Topography of the Oshawa Area, Southern Ontario; Ontario Geological Survey Prelim. Map P.1985, Bedrock Topography Ser., Scale 1:50,000. Geology 1978.

- North:** The Site is bound to the north by Bernice Crescent, and further north by various residential and commercial properties (Upholstery business and a Rogers Communications building).
- East:** The Site is bound to the east by Scarlett Road, further east of which is Sun Convenience (Convenience Store) and Messina Bakery.
- South:** The Site is bound to the south by an industrial building occupied by Athletic Knit Wear, further south of which is railway tracks.
- West:** The Site is bound to the west by residential properties.

2.4 Topography and Drainage

The elevation of the site is approximately 122 m AMSL based on topographic mapping⁶. During the Phase I ESA, the Site was observed to be slightly undulating, with an observed higher elevation on the northern portion of the property; and a lower elevation observed on the southern portion of the property. Stormwater generated at the Site either infiltrates the ground surface or is directed by overland flow towards St. Clair Avenue West.

No surface water bodies or watercourses are located on or adjacent to the Site. The closest waterbody is the Humber River, which is located approximately 60 m southwest of the Site.

3. Previous Investigations

GHD completed the Phase I ESA in February 2023. Based on the results of the Phase I ESA, the following potential sources or areas of potential environmental impairment (APEIs) were identified to be associated with the Site:

- i) **Historical Site Use:** Based on discussions with the Site owner, James Signs occupied the main floor of the building from the early 1950s until around 2017. Operations at the Site included administration, design, manufacturing, painting and printing of a variety of custom signs. Releases, if any, associated with the historical sign manufacturer on the Site represents a potential impact to the soil and groundwater quality at the Site with respect to volatile organic compounds and metals.
- ii) **Historical Land Use:** Review of the 1963 FIP's indicate that Dominion Gasket & Manufacturing Co. Ltd. (Dominion) formerly occupied the adjacent southwest property. Based on the information provided in the plan; Dominion's operations included gasket stamping and curing, plastic hose manufacturing and cork splitting. An oil storage area affiliated with Dominion was located near the northeast corner of the Dominion property, in close proximity to the Site. This property was also identified in the waste generator listing under Bernard Athletic Knit & Enterprises Limited as a generator of paint/pigment/coating residues, aliphatic solvents, petroleum distillates; as well as waste oils and lubricant wastes between 2006 and 2018; and polychlorinated biphenyl (PCB) wastes in 2018. Releases, if any, associated with the historical manufacturing operations on the adjacent property to the southwest represent a potential impact to groundwater quality at the Site with respect to metals, petroleum hydrocarbons, volatile organic compounds and PCBs.
- iii) **Historical Gasoline Underground Storage Tanks:** Review of the 1930 FIP's indicated that two 500-litre gasoline underground storage tanks (USTs) were located approximately 40 metres north of the Site. Releases, if any, associated with the former operation of gasoline USTs to the north of the Site represent a potential impact to groundwater quality at the Site with respect to petroleum hydrocarbons and lead.

⁶ Natural Resources Canada [map]. "The Atlas of Canada - Toporama", governed by version 2.3 of the Open Government License – Canada. November 27, 2020. <http://atlas.gc.ca/toporama/en/index.html>

No other previous environmental reports related to the Site were identified to exist.

4. Scope of Work

The Phase II ESA was completed in general accordance with the requirements of the document entitled "CSA Z769-00 (R2018), Phase II Environmental Site Assessment" for conducting environmental site assessments.

The Phase II ESA included the advancement of two (2) boreholes, one (1) of which was instrumented as an overburden monitoring well, to facilitate the collection of soil and groundwater samples. GHD collected environmental soil samples from two (2) borehole locations (BH1-22 and MW2-22) as part of the Phase II ESA. Due to the presence/size of the on-Site building, accessible exterior areas for drilling were limited to asphalt paved areas on the northern and southern portions of the Site. The investigative locations are shown on **Figure 2**.

The contaminants of potential concern (COPCs) were identified to be volatile organic compounds (VOCs), petroleum hydrocarbon (PHC) fractions 1 to 4 (F1-F4); benzene, toluene, ethylbenzene, and xylenes (collectively referred to as BTEX); polycyclic aromatic hydrocarbons (PAHs); polychlorinated biphenyls (PCBs); and metal/inorganics. Soil samples were submitted for selected laboratory analysis of the COPCs. A sample identification key is presented in **Table 1**.

The soil and groundwater sampling rationale for the Phase II ESA is summarized as follows:

Investigative Location	Rationale	Analytical Parameters	
		Soil	Groundwater
BH1-22	To investigate the soil quality in the northern portion of the Site and downgradient of the former fuel USTs located 40 metres north of the Site.	<ul style="list-style-type: none">– VOCs– PHC– PAHs– PCBs– Metals/Inorganics	<ul style="list-style-type: none">– VOCs– PHC– PAHs– Metals/Inorganics
MW2-22	<p>To investigate the soil quality in the southern portion of the Site and in close proximity to the former manufacturing plant (Dominion) that operated adjacent to the southwest of the Site.</p> <p>MW2-22 was instrumented as a monitoring well to facilitate groundwater sampling, if sufficient water was present in the well.</p>	<ul style="list-style-type: none">– VOCs– PHC– PAHs– PCBs– Metals/Inorganics	<ul style="list-style-type: none">– VOCs– PHC– PAHs– Metals/Inorganics

Note: N/A – Not applicable

5. Field Methodology

5.1 Preparation

5.1.1 Utility Locates

All applicable utility companies (gas, telephone, hydro, water, sewers, etc.) were contacted to demarcate the location of their respective underground utilities prior to initiating subsurface activities. GHD also retained a private utility locating contractor to demarcate any additional utilities. On November 29, 2022, Premier Locates completed private locates at the Site. A copy of the private locate report is provided in **Appendix A**.

5.1.2 Health and Safety Plan

A Site-specific Health and Safety Plan (HASP) was prepared in accordance with the requirements of the Occupational Health and Safety Act prior to initiating field activities. The HASP was maintained on the Site during the completion of the field activities.

5.2 Field Activities

5.2.1 Drilling

Two boreholes were advanced to depths of 11.58 m below ground surface (BGS) using a track-mounted direct push drill rig equipped with hollow stem augers (Powerprobe 9700 VTR PRO). Drilling activities were undertaken by Ontario Ministry of Environment, Conservation and Parks (MECP)⁷ licensed driller (Profile Drilling Inc.) on December 16, 2022.

During the advancement of the boreholes, soil samples were generally collected for soil classification and screening every 0.61 m to the total depth. Prior to use and between each borehole location, the drilling and sampling equipment were thoroughly cleaned using Alconox® soap and potable water rinse.

Soil samples were logged in the field to detail geologic conditions encountered using the modified unified soil classification system (USCS), noting stratigraphy and relative moisture content. The logged soil information is summarized on borehole stratigraphic and instrumentation logs provided in **Appendix B**.

Soil samples were also collected for field screening and/or laboratory analysis, which is further discussed in Section 5.2.2 below.

One of the boreholes (MW2-22) was instrumented with a monitoring well to a maximum depth of 10.36 m BGS. Following soil sampling, 108 mm inner diameter hollow stem augers were utilized to install the monitoring well. Each well was constructed with a 50 millimetre (mm) (2-inch) diameter, No. 10 slot, Schedule 40 PVC screen, 3.05 metres in length and completed with riser pipe. A silica sand pack was placed in the annular space between the PVC screen/riser pipe and the borehole to approximately 0.30 metres above the top of the screen. A bentonite seal was installed in the remaining borehole annulus above the sand pack. A protective steel casing with a concrete collar was placed around each monitoring well. The monitoring well was screened in native gravelly sand/clay as shown on the stratigraphic and instrumentation log provided in **Appendix B**.

⁷ MECP was previously known as the Ontario Ministry of Environment (MOE) or Ontario Ministry of the Environment and Climate Change (MOECC).

Survey data for BH1-22 and MW2-22 had not been completed at the time of this report, however field tie-in measurements were completed using Site features and landmarks to map the locations of the investigative locations as shown on **Figure 2**.

Drill soil cuttings were containerized in 205-litre metal drums for disposal at a later date.

5.2.2 Soil Sample Collection

Soil samples obtained from each borehole were qualitatively and quantitatively screened for the presence of impact. Qualitative screening was based on visual and olfactory observations, while quantitative screening was based on the presence of undifferentiated VOCs in the headspace of soil samples collected as measured using a photoionization detector (PID) (MiniRae 2000). Prior to screening, the PID was inspected and calibrated according to the manufacturer's recommendations. Calibrating the MiniRae 2000 is a two-point process using "fresh air" and the standard reference gas (also known as span gas). First, a "fresh air" calibration, which contained no detectable VOC [0.0 parts per million (ppm)], was used to set the zero point for the sensor. Then, a standard reference gas (isobutylene) that contains a known concentration (100 ppm) was used to set the second point of reference.

PID Model specifications are listed below:

Detector: Photoionization detector with 10.6 electron volt (eV) ultraviolet (UV) lamp

Measurement Accuracy

(isobutylene): 0-2000 ppm: +/- 2 ppm or 10% of reading
>2000 ppm: +/- 20% of reading

Calibration: Two-point field calibration of zero and standard reference gas

Soil samples collected for field screening were placed immediately into a sealable plastic bag and the headspace in the plastic bag was measured for undifferentiated VOC vapours using a PID. The PID readings ranged from 0 ppm to 0.1 ppm.

The rationale for the selection of samples for analyses was based on the results of the Phase I ESA, field evidence of impact, and/or general site coverage. The soil samples were collected in laboratory-supplied containers, which were placed in a cooler containing ice for sample preservation. All soil samples were collected using the required sampling techniques in accordance with O. Reg. 153/04. Soil samples were submitted for laboratory analysis of one or more of VOCs, PHC F1 to F4/BTEX, PAHs, PCBs and metals/inorganics. Additionally, two samples were also collected for grain size analyses; and one representative soil sample was collected from the generated soil cuttings for toxicity characteristic leaching procedure (TCLP) VOCs, benzo(a)pyrene, PCBs, metals and inorganics and ignitability analysis to characterize the soils for off-site disposal at a Ministry of the Environment Conservation and Parks (MECP) approved waste disposal facility.

The collected soil samples were submitted to a Standards Council of Canada (SCC) certified laboratory [ALS Environmental (ALS)] for chemical analysis of parameters presented in **Table 1**. A total of six (6) soil samples [including one (1) field duplicate sample] were collected from the two (2) borehole locations for laboratory analysis.

5.2.3 Groundwater Sample Collection

On December 20, 2022, GHD returned to the Site to develop and collect groundwater samples from MW2-22. However, MW2-22 did not produce any groundwater, and therefore groundwater samples could not be collected as part of the Phase II ESA.

5.2.4 Quality Assurance and Quality Control Measures

A quality assurance/quality control (QA/QC) program was implemented to ensure quality data was generated. The QA/QC program included the collection/submission of the following samples:

- One (1) field duplicate soil sample (i.e., one field duplicate sample per every ten soil samples collected).
- One (1) trip blank per each laboratory submission.

Field duplicate samples are one of two samples taken from the same media (i.e., soil or groundwater) at the same location and time following the same sampling procedures in an identical manner. The field duplicate samples are used to validate field and laboratory analysis. The trip blank was a sample of analyte-free media prepared by the laboratory, taken to the Site and returned to the laboratory unopened. The trip blank is used to document contamination attributable to shipping and field handling procedures. In addition to the above, QC samples were analyzed by the laboratory as required by their analytical methods. In general, one QA/QC sample was submitted for analysis for every ten samples collected.

All samples were submitted to the analytical laboratory following chain-of-custody procedures. The chain-of-custody forms document the condition and handling of the samples throughout the collection, transportation, and final analysis of the samples.

6. Results

6.1 Physical Conditions

6.1.1 Geology

The general stratigraphy at the Site consists of asphalt overlying a sand fill; underlain by native soils to the maximum investigated depth of 11.58 m BGS.

Details of the subsurface conditions are provided on the borehole logs presented in **Appendix B**.

The following subsurface materials and geologic deposits were encountered during the Phase II ESA investigation (from ground surface):

- *Asphalt* – Asphalt was encountered at the ground surface of both BH1-22 and MW-22. The thickness of the asphalt was measured to be 0.09 and 0.15 m, respectively.
- *Sand (Fill)* – Sand fill was encountered below the asphalt layer at BH1-22 and MW-22 and extended to a depth of 2.13 and 5.18 m BGS, respectively.
- *Native Gravelly Sand/Sand* – Below the fill material, gravelly sand was encountered at BH1-22 at depths ranging of between 2.13 and 6.40 m BGS. Gravelly sand was encountered at MW2-22 between 5.18 and 8.08 mBGS; and sand was encountered at a depth of 9.45 m BGS to the termination depth of the borehole (11.58 m BGS).
- *Native Clay* – Clay was encountered below the native gravelly sand/sand layers at BH1-22 at a depth of 10.36 m BGS to the termination depth of the borehole (11.58 m BGS). A clay seam was encountered underneath the gravelly sand and above the native sand at MW2-22 at depths between 8.08 and 9.45 m BGS.

Bedrock was not encountered as part of the Phase II ESA.

6.1.2 Groundwater Flow

As discussed above (see **section 5.2.3**), groundwater was not encountered during the field investigative activities; thus groundwater direction flow at the Site could not be determined as part of the Phase II ESA. However, based on topography of the area; groundwater flow at the Site is anticipated to be in a southwesterly direction towards the Humber River.

6.1.3 Field Evidence of Impact

During drilling and sampling activities, GHD did not observe any field evidence of impact at any of the investigative locations, with the exception of a thin layer of non-odorous impact at BH1-22. Black vegetative staining was observed at BH1-22 within the sand fill layer between 0.08 to 0.76 m BGS.

All PID headspace readings ranged between 0 and 0.1 ppm. The stratigraphic and instrumentation logs are provided in **Appendix B**.

6.2 Selection of Regulatory Standard

The soil and groundwater analytical results were compared to the generic standards provided in the Ministry of the Environment, Conservation and Parks (MECP, formerly Ministry of Environment and Climate Change or MOECC) document entitled "*Soil, Groundwater and Sediment Standards for Use Under Part XV.1 of the Environmental Protection Act*", dated April 15, 2011 (hereinafter referred to as the 2011 MECP Standards). The 2011 MECP Standards provide generic soil and groundwater quality standards for certain chemicals, based on combinations of the following site-specific conditions.

Property Use – Agricultural or Other or Residential/Parkland/Institutional/Industrial/Commercial/Community

The current on-Site property use is mixed commercial and residential property use. The intended property use is community property use (road right-of-way). Based on the intended future use of the Site, industrial/commercial/community property use was applied.

Restoration of Groundwater Quality – Potable/Non-Potable

There are no water wells currently located on Site. The Site is serviced with municipal potable water from the City of Toronto distribution system, which obtains its potable water from Lake Ontario. As such, the standards for a non-potable groundwater condition are considered applicable to the Site.

Restoration Depth – Full Depth or Stratified Depth

For comparative purposes, the results were compared to full depth standards.

Soil Texture – Coarse or Medium to Fine

Based on field observations of the soil encountered within the boreholes at the Site; as well as the grain size analysis of the native material, the predominant soil texture is coarse.

Shallow Soil Property

A shallow soil property means a property of which a third or more of the area consists of soil equal to or less than 2 metres in depth beneath the soil surface, excluding any non-soil surface treatment. The Site is not considered to be a shallow soil property as the Site contains more than 2 m of soil (presented in Section 6.1.1 and on **Appendix B**).

Within 30 m of a Water Body

The Site is not located within 30 m of a water body, as defined in Section 1 of O. Reg. 153/04.

Sensitive Site Condition

The Site is considered to be environmentally sensitive if:

- i. The property is located within an area of natural significance as defined by the conditions presented in Section 1 of O. Reg. 153/04, as amended.
- ii. The soil at the property has a pH value less than 5 or greater than 9 for surface soil or less than 5 or greater than 11 for subsurface soil.

The Site is not located in an area of natural significance as defined by the conditions presented in Section 1 of O. Reg. 153/04, as amended. Based on review of the analytical results, the pH of all analyzed soil samples were between the acceptable limits of 5 and 9 standard units as shown in **Table 2**.

Therefore, the Site is not considered to be environmentally sensitive.

Based on the collective information above, the applicable standards were determined to be Table 3: Full Depth Generic Site Condition Standards for Industrial/Commercial/Community Property Use and Coarse Textured Soil (Table 3 Standards).

6.3 Analytical Results

6.3.1 Soil Quality

Based on a review of the analytical results, the concentrations of all analyzed parameters were below the applicable Table 3 Standards. The soil analytical results are presented in **Table 2**.

Based on the TCLP analytical results for the drums of soil cuttings, the soils would be classified as non-hazardous for waste disposal purposes, in accordance with Schedule 4 of Ontario Regulation 347, as amended. The TCLP analytical results are presented in **Table 3**.

The laboratory certificates of analysis are provided in **Appendix C**.

6.3.2 Groundwater Quality

As discussed above, groundwater was not encountered during the field investigative activities and therefore groundwater samples were not collected or submitted for laboratory analysis as part of the Phase II ESA.

7. Summary and Conclusions

Based on the findings of the Site investigation activities undertaken by GHD, the following summary and conclusions are provided:

- On December 16, 2022, two (2) boreholes (BH1-22 and MW2-22) were advanced to depths of 11.58 m BGS; one (1) of which was instrumented with a monitoring well (MW2-22) to a maximum depth of 10.36 m BGS.

- The general stratigraphy at the Site consists of asphalt overlying a sand fill; underlain by native soils to the maximum investigated depth of 11.58 m BGS. The interpreted groundwater flow direction at the Site is in a southwesterly direction towards the Humber River.
- Based on the soil analytical results, the concentrations of all analyzed parameters were below the applicable Table 3 Standards.
- Groundwater was not encountered during the field investigative activities; thus groundwater samples were not collected or submitted for laboratory analysis as part of the Phase II ESA.

All of Which is Respectfully Submitted,

GHD

PRIVately-owned utility locate CLIENT COMPANY ACKNOWLEDGEMENTS

PAGE 3 OF 3

PREMIER LOCATES

BY SIGNING OR RECEIVING AN EMAILED COPY OF THIS LOCATE REPORT, THE CLIENT HAS READ, ACKNOWLEDGES AND AGREES TO THE FOLLOWING:

EXCAVATOR
AN EXCAVATOR IS ANY PERSON, PARTNERSHIP, CORPORATION, PUBLIC AGENCY, AGENT, OR OTHER ENTITY THAT IS RESPONSIBLE FOR CARRYING OUT A GROUND DISTURBANCE.

GROUND DISTURBANCE / EXCAVATE
GROUND DISTURBANCE OR EXCAVATE MEANS ANY WORK, OPERATION, OR ACTIVITY ON OR UNDER THE EXISTING SURFACE RESULTING IN A DISTURBANCE OR DISPLACEMENT OF THE SOIL OR GROUND COVER. GROUND DISTURBANCE OR EXCAVATE CAN INCLUDE, BUT ARE NOT LIMITED TO, THE FOLLOWING: DIGGING; EXCAVATION; TRENCHING; DITCHING; TUNNELLING; BORING/DRILLING/PUSHING; AUGERING; TOPSOIL STRIPPING; LAND LEVELLING/GRAZING; FLOWING TO INSTALL UNDERGROUND INFRASTRUCTURE; TREE PLANTING; CLEARING AND STUMP REMOVAL; SUBSOILING; BLASTING/USE OF EXPLOSIVES; QUARRYING; GRINDING AND MILLING OF ASPHALT/CONCRETE; SEISMIC EXPLORATION; DRIVING FENCE POSTS, BARS, RODS, PINS, ANCHORS, OR PILLING; AND, CROSSING OF BURIED PIPELINES OR OTHER UNDERGROUND INFRASTRUCTURE BY HEAVY LOADS OFF THE TRAVELED PORTION OF A PUBLIC ROADWAY.

LIMIT OF LOCATE
THE EXCAVATOR MUST NOT WORK OUTSIDE THE INDICATED LOCATE AREA WITHOUT FURTHER LOCATES BY PREMIER LOCATES INC. (SUBSEQUENTLY REFERRED TO AS "PLI").

MULTIPLE EXCAVATORS
WHEN A LOCATE IS BEING PROVIDED FOR MORE THAN ONE PARTY WORKING ON THE PROJECT, THE PERSON NAMED ON THIS LOCATE REPORT IS CONSIDERED TO BE ACTING ON BEHALF OF THE EXCAVATOR IN ACCEPTING AND ENSURING THE EXCAVATOR RECEIVES A COPY OF THIS LOCATE.

VALIDITY OF LOCATE
THIS LOCATE IS ONLY VALID FOR 60 DAYS UNLESS STATED OTHERWISE ON THE LOCATE REPORT. A RE-MARK OF SURFICIAL MARKINGS PLACED ON THE SITE BY PLI MUST BE OBTAINED PRIOR TO ANY EXCAVATION IF: THE DATE OF EXCAVATION IS PAST THE VALIDATION PERIOD; MARKINGS BECOME UNCLEAR, DISAPPEAR, ARE DISTURBED OR DISPLACED; THE SKETCH AND SITE MARKINGS DO NOT COINCIDE; THE WORK LOCATION HAS CHANGED; AND, IF ANYTHING OCCURS WHICH MAY INDICATE THAT A NEW, BETTER, OR DIFFERENT LOCATE SERVICE IS NEEDED.

GROUND MARKINGS
IF THE MARKINGS DISAPPEAR OR ARE DISPLACED OR SHOULD SKETCH MARKINGS NOT COINCIDE WITH GROUND MARKINGS. THE PRIVATE LOCATE IS INVALID AND PLI WILL NEED TO BE CONTACTED TO EITHER REFRESH THE MARKINGS OR FIX ANY DISCREPANCY.

LEGAL REQUIREMENTS
YOU ARE REQUIRED BY LAW TO HAVE ALL BURIED PUBLIC AND PRIVATE UTILITIES LOCATED AND MARKED IN THE VICINITY OF ANY WORK BEFORE PERFORMING ANY TYPE OF EXCAVATION OR DRILLING ACTIVITIES. YOU MUST HAVE VALID PUBLIC LOCATES FOR YOUR WORK AREA. FINES AND PENALTIES BY PUBLIC AUTHORITIES CAN BE GIVEN IF WORKING WITH EXPIRED LOCATES.

PUBLIC LOCATES
ANY PUBLIC UTILITY OWNED SERVICES (GAS, TELEPHONE, CABLE TV, HYDRO, WATER, SEWER, ETC.) WITHIN THE LIMITS OF THIS LOCATE AND SHOWN ON THIS LOCATE REPORT, ARE FOR REFERENCE ONLY. THESE PUBLIC UTILITIES HAVE BEEN MARKED BY OTHERS OR MARKED BY PLI WITH PINK PAINT. ANY BURIED UTILITIES MARKED IN PINK WITHIN THE LOCATE AREA, ARE FOR SURVEY PURPOSES ONLY, AND REQUIRE A PUBLIC LOCATE BEFORE EXCAVATING. IT IS THE RESPONSIBILITY OF THE CLIENT TO ENSURE AND VERIFY THAT THE INTENDED WORK COINCIDES WITH THE WORK AREAS DRAWN OR DESCRIBED ON ALL PUBLIC AND PRIVATE UTILITY LOCATE REPORTS.

SCOPE OF WORK
THIS PRIVATE LOCATE REPORT IS BASED ON INFORMATION GIVEN AT THE TIME OF THE LOCATE. ANY CHANGES TO THE LOCATION OR SCOPE OF WORK REQUIRES A NEW LOCATE REPORT.

BUILDING AND/OR SERVICE ROOM ACCESS
SOME CABLES OR PIPES MAY NOT BE DETECTED OR LOCATED IF DIRECT PHYSICAL ACCESS TO BUILDING SERVICE ROOMS ARE NOT PROVIDED AT THE TIME OF THE LOCATE.

PHYSICAL LIMITATIONS
IF THERE ARE ANY PHYSICAL LIMITATIONS AT THE SITE (I.E. SNOW-COVERED GROUND, PARKED CARS, EQUIPMENT OR MATERIALS, ETC. CONGESTING THE AREA TO BE LOCATED), THE CLIENT IS HEREBY MADE AWARE AND ACKNOWLEDGES THAT SOME CABLES OR PIPES MAY NOT BE DETECTED OR LOCATED IF THE LOCATE AREA IS NOT CLEAR OF THESE OBSTRUCTIONS AT THE TIME OF THE LOCATE.

INTERIOR LOCATES
DUE TO BUILDING INTERFERENCES, CONGESTION, AND HIDDEN OR INACCESSIBLE ELECTRICAL CONDUITS OR PIPES, SOME CABLES OR PIPES MAY OR MAY NOT BE DETECTED WITH THE EQUIPMENT EMPLOYED BY PLI. PLI USES GROUND PENETRATING RADAR (GPR) WITH A 1000 MHZ ANTENNA ALONG WITH ELECTROMAGNETIC CABLE LOCATE EQUIPMENT WHILE PERFORMING INTERIOR PRIVATE LOCATES. SEWER LINES INSIDE BUILDINGS MAY NOT BE VISIBLE WITH GPR IF THEY ARE DEEPER THAN 2 FEET OR ARE COMPRISED OF A MATERIAL SUCH AS PLASTIC OR CLAY THAT ARE NOT VISIBLE TO GPR.

SANITARY AND STORM SEWERS
PLI USES A CCTV CAMERA WITH BUILT-IN SONDE TO LOCATE SEWER LINES PROVIDED: SEWER DRAWINGS HAVE BEEN PROVIDED TO PLI FROM THE PRIVATE LANDOWNER; THERE IS SUFFICIENT ACCESS TO THE SEWER LINE THAT DOES NOT REQUIRE CONFINED SPACE ENTRY; AND, THE SEWER LINE IS ON PRIVATE PROPERTY. IF A MANHOLE OR CATCHBASIN IS SHOWN ON A DRAWING OR FOUND DURING THE LOCATE, PLI WILL ATTEMPT TO OPEN THEM, MARK THE INVERT DIRECTION, AND USE A CCTV CAMERA WITH SONDE TO LOCATE THE LINE IF SO REQUESTED BY THE CLIENT. IF PLI IS UNABLE OPEN THE MH OR CB, DETERMINE THE DIRECTION OF THE INVERTS, OR LOCATE THE BURIED LINE, IT WILL BE INDICATED AS A LIMITATION AND NOTED ON THE LOCATE REPORT. THE CLIENT ALSO ACKNOWLEDGES THAT TRUNK SEWER AND WATER MAINS MAY NOT BE DETECTABLE AND REQUIRE A PUBLIC LOCATE IF WITHIN AN EASEMENT ON PRIVATE PROPERTY.

UNDERGROUND STORAGE TANKS AND ASSOCIATED EQUIPMENT
PLI DOES NOT LOCATE UNDERGROUND STORAGE TANKS OR ANY ASSOCIATED EQUIPMENT UNLESS GROUND PENETRATING RADAR AND/OR AN EM61 TIME DOMAIN METAL DETECTOR IS EMPLOYED AT THE TIME OF THE LOCATE. THE CLIENT ALSO HAS BEEN MADE AWARE OF AND ACKNOWLEDGES THAT ANY EXCAVATING OR DRILLING WITHIN PLI DEFINED CRITICAL AREAS (FOUND IN THE MEMBER LOGIN AREA AT WWW.PREMIERLOCATES.CA) AROUND ANY UNDERGROUND PETROLEUM EQUIPMENT AND STRUCTURES SUCH AS UNDERGROUND STORAGE TANKS (USTS) AND FUEL DISPENSERS; AND, WITHIN THE AREA BETWEEN USTS, PUMP DISPENSERS AND FUEL KIOSK, REQUIRES HAND DIGGING OR SOFT DIGGING WITH VACUUM EXCAVATION EQUIPMENT TO EXPOSE THE WORK AREA.

LIMITATIONS

- THE TECHNOLOGIES EMPLOYED BY PLI TO TRACE AND MARK BURIED FACILITIES ARE COMPLIANT WITH ACSE STANDARD 38-02 LEVEL B, WHICH ARE ASSIGNED TO HAVE A MODERATE RISK. THESE GEO-PHYSICAL METHODS ARE NOT 100% EFFECTIVE AND CANNOT DETECT ALL BURIED SERVICES SINCE THERE ARE TOO MANY VARIABLES THAT CAN WORK AGAINST THE EQUIPMENT. IT MAY NOT BE POSSIBLE TO ABSOLUTELY "CLEAR" REGARDLESS OF THE SKILL, EFFORT, OR TECHNOLOGIES USED BY PLI. LOCATING METHODS USED BY PLI ONLY HELPS REDUCE RISK OF STRIKING A BURIED UTILITY AND DOES NOT ELIMINATE THE RISK. IF PRECISE HORIZONTAL AND VERTICAL LOCATIONS OF BURIED FACILITIES ARE NEEDED, THEN ACSE STANDARD 38-02 QUALITY LEVEL A METHODS WOULD NEED TO BE EMPLOYED. QUALITY LEVEL A METHODS INVOLVE THE ACTUAL EXPOSURE OF A FACILITY BY MEANS OF EITHER HAND DIGGING OR THE USE OF VACUUM EXCAVATION SYSTEMS.
- SOME CABLES OR PIPES MAY NOT BE DETECTABLE OR LOCATED ACCURATELY DUE TO DEPTH, LACK OF OR MALFUNCTIONING TRACER WIRES, MATERIAL MAKEUP, CONFINED SPACES, OR INABILITY TO CONNECT PROPERLY. THIS MAY BE COMPOUNDED BY THE LACK OF ACCESS OR ACCESS TOO FAR FROM THE AREA TO BE TRACED.
- THE LOCATION AND MARKING OF BURIED FACILITIES BY THE PLI LOCATE TECHNICIAN FOR THE CLIENT REPRESENTATIVE IS FOR THE CONVENIENCE OF THAT SAID APPLICANT ONLY AND DOES NOT RELIEVE SAID APPLICANT, OR ANY PERSON OR CORPORATION, FROM LIABILITY FOR DAMAGES OR PERSONAL INJURY INCLUDING DEATH TO ANY PERSON OR FOR PROPERTY DAMAGE CAUSED TO THE SAID PLANT OR TO ANY OTHER PROPERTY, BY REASON OF THE SAID APPLICANT, OR ANY OTHER PERSON OR CORPORATION, HAVING RELIED UPON THE LOCATION AND MARKING OF FACILITIES BY PLI.
- IF THERE ARE ANY LIMITATIONS NOTED ON THE LOCATE REPORT AND/OR SITE SERVICES CHECKLIST, THE CLIENT ACCEPTING THIS LOCATE REPORT MUST INFORM ALL INVOLVED WITH THE PROJECT OF THE LIMITATION INCLUDING AND NOT LIMITED TO: ALL FIELD STAFF, PROJECT MANAGERS; THEIR CLIENT; AND THE PROPERTY OWNER OF THE SUBJECT PROPERTY. THE PROPERTY OWNER IS ULTIMATELY RESPONSIBLE FOR THEIR BURIED FACILITIES AND SHOULD HAVE THE FINAL DECISION IN HOW TO EXCAVATE NEAR THEIR BURIED FACILITIES IF THEY CANNOT BE ACCURATELY LOCATED AND MARKED. WHOEVER ACCEPTS THE LIMITATION CLAIMS RESPONSIBILITY IF A BURIED FACILITY IS DAMAGED AS A RESULT OF THE LIMITATION.
- THE PRIVATE UTILITY LOCATE PREPARED BY PLI IS FOR THE USE OF THE CLIENT. IF THE CLIENT'S PROVIDES THE LOCATE REPORT TO A SUB-CONTRACTORS FOR RELIANCE, THE SUB-CONTRACTOR MUST BE GIVEN A COPY OF THE LOCATE REPORT AND NOTIFIED OF ANY LIMITATIONS NOTED WITHIN THE LOCATE REPORT.

THE PERSON ACCEPTING THIS PRIVATE UTILITY LOCATE REPORT, AGREES THAT THEY FULLY UNDERSTAND ALL OF THE INFORMATION PRESENTED IN THE LOCATE REPORT, SITE SERVICES CHECKLIST, AND CLIENT COMPANY ACKNOWLEDGEMENT.

THE CLIENT WARRANTS THAT PLI IS NOT LIABLE FOR ANY CLAIMS FOR DAMAGES TO ANY UNDERGROUND FACILITY WHERE PLI WAS NOT NOTIFIED OF SUCH DAMAGE FORTHWITH, SUCH THAT PLI CAN COMPLETE A DAMAGE INVESTIGATION TO PHYSICALLY VIEW ANY SUCH DAMAGED UNDERGROUND FACILITY WHETHER OR NOT ANY SUCH DAMAGE MAY ATTRIBUTED TO ERRORS OR OMISSIONS COMMITTED BY PLI IN PERFORMING THE WORK.

PLI SHALL NOT BE LIABLE FOR ANY AMOUNT IN EXCESS OF THE FEES PAID BY THE CLIENT TO PLI FOR THE SERVICE ON ACCOUNT OF ANY LOSS, INJURY, DEATH OR DAMAGE WHETHER RESULTING DIRECTLY OR INDIRECTLY TO A PERSON OR PROPERTY IRRESPECTIVE OF THE CAUSE OR ORIGIN OF SUCH LOSS, INJURY, DEATH OR DAMAGE INCLUDING, WITHOUT LIMITATION, LOSS, INJURY, DEATH OR DAMAGE ATTRIBUTABLE TO THE NEGLIGENCE OF PLI, ITS EMPLOYEES AND AGENTS IN THE PERFORMANCE OR NON-PERFORMANCE OF THE SERVICE.

CLIENT COMPANY ACKNOWLEDGEMENTS - GPR & EM6I

BY SIGNING OR RECEIVING AN EMAILED COPY OF THIS LOCATE REPORT, THE CLIENT HAS READ, ACKNOWLEDGES AND AGREES TO THE FOLLOWING:

DATA PRESENTATION

THE GEOPHYSICAL DATA WERE ACQUIRED AT THE STATION SPACING AND ON THE DATE AS SHOWN ON THE FRONT OF THIS SHEET.

THE INTERPRETATION OF THE GROUND PENETRATING RADAR (GPR) AND/OR EM6I IS PRESENTED ON THE SKETCH ON THE FRONT OF THIS SHEET AND WITH PAINT MARKS IN THE WORK STUDY AREA.

THE GPR AND EM6I DATA ARE PRESENTED ALONG A SURVEY LINE, DISPLAYED FROM LEFT TO RIGHT. THE GPR DATA IS A REPRESENTATIVE IMAGE OF THE GPR SIGNAL AMPLITUDE AND IS NOT AN IMAGE OF THE SUBSURFACE. THE GPR SIGNAL PENETRATION DEPTH IS NOTED ON THE FRONT OF THIS SHEET. THE STANDARD EM6I CANNOT DETECT SINGLE OBJECTS AND DEPTHS MUCH GREATER THAN 3-4 METERS.

GEOPHYSICAL DATA RECORDED ON-SITE IS RE-EXAMINED AFTER THE COMPLETION OF THE SURVEY AND A SUPPLEMENTAL REPORT WILL BE SENT IF COMPUTER ANALYZED DATA DIFFERS FROM THE FIELD TECHNICIANS INTERPRETATION.

TECHNICAL LIMITATIONS

THE INTERPRETATION OF THE GEOPHYSICAL DATA OBTAINED DURING THE INVESTIGATION IS INTENDED FOR THE GUIDANCE OF THE CLIENT ONLY. SHOULD THIS INTERPRETATION OF THE DATA BE USED DURING ANY SUBSEQUENT PROGRAMS, THE USER MUST BE AWARE OF THE FOLLOWING INTERPRETIVE RESTRICTIONS:

THE CLIENT ACKNOWLEDGES THAT THE LAWS OF FUNDAMENTAL PHYSICS APPLY AND DO NOT ENABLE PREMIER LOCATES INC. (PLI) LOCATING EQUIPMENT TO DETECT ALL UTILITIES, OBJECTS, FEATURES, AND STRUCTURES OR TO PROVIDE ALL COORDINATES OF THE POSITION THEREOF. PIPE, CABLE, CONDUIT, UTILITIES, OBJECTS, FEATURES OR STRUCTURES WHICH ARE NOT DETECTABLE (I.E. NOT "LOCATABLE") BECAUSE OF THE LAWS OF FUNDAMENTAL PHYSICS CANNOT BE LOCATED BY PLI AND ARE NOT THE SUBJECT OF THE PROVISION OF THE "SERVICE" PURSUANT TO THIS CONTRACT.

THE "SERVICE" PROVIDED TO THIS CONTRACT IS THE LOCATION, LATERALLY AND LONGITUDINALLY, OF UTILITIES, OBJECTS, FEATURES OR STRUCTURES AND THE SUBSEQUENT MARKING OF THE SITE ACCORDING TO THE STANDARD SUBSURFACE UTILITY LOCATING INDUSTRY PRACTICE. THE DEPTH AND/OR SIZE OF PIPE, CABLE, CONDUITS, UTILITIES, OBJECTS, FEATURES AND STRUCTURES IS RECORDED ONLY IF THE CLIENT HAS REQUESTED PRIOR TO THE START OF THE SURVEY.

A "DETECTABLE FEATURE" DEFINED BY THIS INVESTIGATION MAY CONSIST OF A CABLE, WIRE, PIPE, CONDUIT, STRUCTURE OR OTHER OBJECT CONTAINED WITHIN THE SUBSURFACE. DIFFERENTIATION BETWEEN THESE TYPES OF FEATURES IS NOT PROMISED NOR GUARANTEED. A FEATURE IS ONLY DETECTABLE IF THE SUBSURFACE ALLOWS THE GPR SIGNAL TO PROPAGATE DEEP ENOUGH TO DEFINE THE FEATURE. GPR PENETRATION INTO THE SUBSURFACE VARIES DEPENDING UPON THE SUBSURFACE CONDITIONS AND IS NOT CONTROLLED BY THE RADAR EQUIPMENT OR THE TECHNICIAN'S ABILITY. LIMITED PENETRATION IS CAUSED BY HIGH-CONDUCTIVITY MATERIALS SUCH AS CLAY AND SILT SOILS AND SOLIDS THAT ARE SALT CONTAMINATED. PERFORMANCE IS ALSO LIMITED BY SIGNAL SCATTERING IN HETEROGENEOUS CONDITIONS (E.G. ROCKY SOILS, LARGE TREE ROOTS, CONTRACTION DEBRIS ETC.). SNOW, DISSOLVED SOLIDS, MOISTURE, Voids, AND FEATURES HAVING A SIGNIFICANT ELECTROMAGNETIC VARIANCE.

ACCURACY OF INFERRED BURIED DETECTABLE FEATURES WILL VARY DUE TO SUBSURFACE SOIL CONDITIONS AND SURFACE CONDITIONS (I.E. LOOSE DIRT, ICE, SNOW, TALL GRASS, AND WATER).

PLI IS NOT LIABLE FOR DAMAGES, IF ANY, RESULTING FROM PHYSICAL EXPOSURE OF ANY 'DETECTABLE FEATURES' BY THE CLIENT, OR THEIR REPRESENTATIVES, OR THEIR SUB-CONTRACTORS, OR ANY OTHER PERSON, OR CORPORATION, BASED ON THE INFORMATION PROVIDED.

AREAS CONSIDERED TO BE INACCESSIBLE (AN "INACCESSIBLE AREA") FOR THE SERVICE INCLUDE, BUT ARE NOT LIMITED TO, THE FOLLOWING: THOSE OF PHYSICALLY RESTRICTED ACCESS; THOSSES COVERED BY A STRUCTURE OR OBJECT (I.E. BUILDING WALLS, VEHICLES, EQUIPMENT, DEBRIS, STOCKPILES OF MATERIAL OR SNOW ETC.); THOSE COVERED BY OPEN WATER; THOSE COVERED BY WOODS OR VEGETATION TOO THICK TO PERMIT EASY WALKING; THOSE WITH SURFACES TERRAIN SLOPES STEEPER THAN 1:3; AND, THOSE WHERE THE SAFETY OF THE TECHNICIAN IS JEOPARDIZED (I.E. UNSTABLE FOOTING, ENVIRONMENTAL HAZARDS, UNCONTROLLED ROADS, ETC.). THE JUDGEMENT OF THE PLI TECHNICIAN WILL PREVAIL ON ACCESSIBILITY DECISIONS.

IT IS THE RESPONSIBILITY OF THE CLIENT TO PROVIDE DIRECT AND SIMPLE ACCESS FREE FROM SURFACE OBJECTS TO ANY AND ALL SURVEY AREAS. PLI ACCEPTS NO RESPONSIBILITY FOR SURVEYING IN ANY AREAS WHERE THE CLIENT DOES NOT PROVIDE ACCESS AND/OR APPROPRIATE WORKPLACE SAFETY MEASURES. AREAS CONSIDERED TO BE INACCESSIBLE FOR SCANNING AND MARKING, ASIDE FROM RESTRICTED ACCESS, INCLUDE THE FOLLOWING, BUT NOT LIMITED TO: WITHIN 1.0 M OF A STRUCTURE OR OBJECT (I.E. WALLS, VEHICLES, EQUIPMENT, DEBRIS, STOCKPILES OF MATERIALS, ETC.).

THE EM6I AND/OR EM31 RESPONSES OF TARGETS MAY BE DETECTED ONLY IF THEY ARE GREATER THAN THE BACKGROUND NOISE LEVELS. GEOPHYSICAL NOISE (NOT SENSOR SENSITIVITY) IS THEREFORE THE LIMITING FACTOR IN DETERMINING THRESHOLDS AND DETECTION DEPTHS.

LIMITS OF PREMIER LOCATES INC. LIABILITY

ANY INFORMATION PROVIDED BY PLI REGARDING THE LOCATION OF UNDERGROUND UTILITIES BY GPR AND/OR EM6I AND/OR EM31, DOES NOT SUBSTITUTE FOR A FULL PRIVATE UTILITY LOCATE PERFORMED BY PLI. THE SERVICE IS PROVIDED TO ASSIST WITH EXCAVATION PLANNING ONLY. THE CLIENT IS ALWAYS RESPONSIBLE FOR OBTAINING SANCTIONED LOCATES FROM THE OWNERS OF UNDERGROUND PLANT SUCH AS ELECTRIC CABLES, NATURAL GAS, ANY TYPE OF PIPELINE, TELECOMMUNICATIONS, CABLE TV, FIBRE-OPTIC CABLES, WATER, SEWER, OIL, STEAM, ETC. THE CLIENT MUST CONTACT THE UTILITY OWNERS DIRECTLY, OR THEIR CALL CENTRE, TO FACILITATE THESE LOCATES.

PLI MARKING OF UNDERGROUND FEATURES IS ONLY FOR THE CONVENIENCE OF THE CLIENT, AND THIS DOES NOT RELIEVE THE CLIENT, OR ANY OTHER PERSON, OR CORPORATION, FROM LIABILITY FOR DAMAGES FOR PERSON INJURY INCLUDING DEATH, OR FOR PROPERTY DAMAGE OR LIABILITY CAUSED TO OR FROM ANY UNDERGROUND UTILITY, WITHIN THE AREA ON THE PROPERTY WHERE THE UNDERGROUND UTILITY AND/OR CLEARANCE WAS MARKED, OR ANY OTHER PROPERTY, BY REASON OF THE CLIENT, ITS REPRESENTATIVES, OR ANY OTHER PERSON, OR CORPORATION HAVING RELIED UPON THE SURFACE MARKING PROVIDED BY PLI.

PLI IS NOT LIABLE FOR DAMAGES RESULTING FROM PHYSICAL EXPOSURE OF ANY UNDERGROUND FEATURES BY THE CLIENT, ITS REPRESENTATIVES, THEIR SUB-CONTRACTORS OR ANY OTHER PERSON OR CORPORATION.

THE SERVICE COMPLETED BY PLI IS BASED ON INFORMATION PROVIDED BY THE CLIENT AT OR PRIOR TO THE EARLIER OF THE TIME WHEN THE SERVICE IS DESCRIBED IN THIS CONTRACT OR THE PERFORMANCE OF THE SERVICE. THE SERVICE PROVIDED BY PLI REGARDING THE LOCATION OF ANY UNDERGROUND UTILITY, OBJECT OR STRUCTURE, IS ON A BEST EFFORT AND BEST PRACTICES BASIS.

A RE-MARK OF SURFICIAL MARKINGS PLACED ON THE SITE BY PLI MUST BE OBTAINED PRIOR TO ANY EXCAVATION IF:

- MARKINGS BECOME UNCLEAR, DISAPPEAR, ARE DISTURBED OR DISPLACED;
- THE SKETCH AND SITE MARKINGS DO NOT COINCIDE;
- THE WORK LOCATION HAS CHANGED;
- IF ANYTHING OCCURS WHICH MAY INDICATE THAT A NEW OR BETTER OR DIFFERENT LOCATE SERVICE IS NEEDED.

IF THE CLIENT EXCAVATES OUTSIDE THE LIMIT OF LOCATE AREA, PLI ACCEPTS NO RESPONSIBILITY.

THE CLIENT WARRANTS THAT PLI IS NOT LIABLE FOR ANY CLAIMS FOR DAMAGES TO ANY UNDERGROUND PLANT WHERE PLI WAS NOT NOTIFIED OF SUCH DAMAGE FORTHWITH SUCH THAT PLI CAN COMPLETE A DAMAGE INVESTIGATION TO PHYSICALLY VIEW ANY SUCH DAMAGED UNDERGROUND PLANT WHETHER OR NOT ANY SUCH DAMAGE MAY BE ATTRIBUTED TO ERRORS OR OMISSIONS COMMITTED BY PLI IN PERFORMING THE WORK.

PLI SHALL NOT BE LIABLE FOR ANY AMOUNT IN EXCESS OF THE FEES PAID BY THE CLIENT TO PLI FOR THE SERVICE ON ACCOUNT OF ANY LOSS, INJURY, DEATH OR DAMAGE WHETHER RESULTING DIRECTLY OR INDIRECTLY TO A PERSON OR PROPERTY IRRESPECTIVE OF THE CAUSE OR ORIGIN OF SUCH LOSS, INJURY, DEATH OR DAMAGE.

ACKNOWLEDGMENTS / WARNINGS:

READ AND FULLY UNDERSTAND ALL THE PAGES CONTAINED IN THIS LOCATE REPORT. THIS LOCATE REPORT INCLUDES THIS PRIMARY LOCATE REPORT, AN AUXILIARY LOCATE REPORT FOR EACH LOCATE SERVICE PROVIDED BY PREMIER LOCATES INC., AS WELL AS THE DISCLAIMER AND CLIENT ACKNOWLEDGEMENT SHEETS FOR EACH AUXILIARY REPORT.

LOCATES ARE VALID FOR A LIMITED TIME FRAME. SEE THE VALIDITY PERIODS FOR EACH UTILITY OWNER INDICATED ON EACH AUXILIARY SHEET IN THIS REPORT.

THIS LOCATE REPORT IN ITS ENTIRETY MUST BE AT THE WORK SITE AND IN THE HANDS OF THE PERSON EXCAVATING DURING ANY TYPE OF GROUND DISTURBANCE WORK FOR THIS LOCATE TO BE VALID. IF GROUND MARKINGS DO NOT MATCH THE LOCATE REPORT, ARE MISSING, OR THE EXCAVATOR FINDS AN ERROR WITH THIS REPORT, THIS LOCATE IS INVALID.

ANY CHANGES TO LOCATION OR NATURE OF EXCAVATION WORK REQUIRES A NEW LOCATE. THE EXCAVATOR MUST NOT WORK OUTSIDE THE LOCATED AREA WITHOUT A NEW LOCATE. FOR ALL LOCATE REQUESTS, INCLUDING REMARKS, CONTACT PREMIER LOCATES AT THE NUMBER ABOVE FOR A NEW LOCATE.

EACH UTILITY OWNER DEFINES THEIR OWN TOLERANCE DISTANCE. THE TOLERANCE DISTANCE IS THE HORIZONTAL SPACE ON EITHER SIDE OF THE MARKED FACILITY THAT MUST BE EXPOSED USING SOFT EXCAVATION TECHNIQUES (CHECK WITH EACH UTILITY OWNER FOR THEIR APPROVED PROCEDURES FOR SOFT EXCAVATION TECHNIQUES). PLEASE CHECK THE TOLERANCE DISTANCE NOTED ON EACH AUXILIARY SHEET. DO NOT USE MECHANICAL EXCAVATION EQUIPMENT WITHIN THE TOLERANCE DISTANCE OF A MARKED BURIED FACILITY.

BY ACCEPTING THIS REPORT VIA EMAIL AND RELYING UPON THIS LOCATE REPORT, THE RECIPIENT ACKNOWLEDGES AND IS IN AGREEMENT TO ALL THE TERMS AND CONDITIONS AND LIMITATIONS ON EACH LOCATE SHEET.

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QC Interpretive report to assist with Quality Review and Sample Receipt Notification (SRN).

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is conducted in accordance with US FDA 21 CFR Part 11.

<i>Signatures</i>	<i>Position</i>	<i>Laboratory Department</i>
Amanda Ganouri-Lumsden	Department Manager - Microbiology and Prep	Centralized Prep, Waterloo, Ontario

Project : 12579218

General Comments

The analytical methods used by ALS are developed using internationally recognized reference methods (where available), such as those published by US EPA, APHA Standard Methods, ASTM, ISO, Environment Canada, BC MOE, and Ontario MOE. Refer to the ALS Quality Control Interpretive report (QCI) for applicable references and methodology summaries. Reference methods may incorporate modifications to improve performance.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Please refer to Quality Control Interpretive report (QCI) for information regarding Holding Time compliance.

Key : CAS Number: Chemical Abstracts Services number is a unique identifier assigned to discrete substances
LOR: Limit of Reporting (detection limit).

Unit	Description
-	no units
%	percent
mg/kg	milligrams per kilogram
mg/L	milligrams per litre
mS/cm	millisiemens per centimetre
pH units	pH units

>: greater than.

<: less than.

Surrogate: An analyte that is similar in behavior to target analyte(s), but that does not occur naturally in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery.

Test results reported relate only to the samples as received by the laboratory.

UNLESS OTHERWISE STATED on SRN or QCI Report, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.

Workorder Comments

08-Feb-2023. IDs updated for ALS samples 1 through 5. All analysis results are as per the previous report.

This report is automatically generated by the ALS LIMS (Laboratory Information Management System) through evaluation of Quality Control (QC) results and other QA parameters associated with this submission, and is intended to facilitate rapid data validation by auditors or reviewers. The report highlights any exceptions and outliers to ALS Data Quality Objectives, provides holding time details and exceptions, summarizes QC sample frequencies, and lists applicable methodology references and summaries.

Key

Anonymous: Refers to samples which are not part of this work order, but which formed part of the QC process lot.

CAS Number: Chemical Abstracts Service number is a unique identifier assigned to discrete substances.

DQO: Data Quality Objective.

LOR: Limit of Reporting (detection limit).

RPD: Relative Percent Difference.

Workorder Comments

Holding times are displayed as "----" if no guidance exists from CCME, Canadian provinces, or broadly recognized international references.

Summary of Outliers

Outliers : Quality Control Samples

- No Method Blank value outliers occur.
- No Duplicate outliers occur.
- No Laboratory Control Sample (LCS) outliers occur
- No Matrix Spike outliers occur.
- No Test sample Surrogate recovery outliers exist.

Outliers: Reference Material (RM) Samples

- No Reference Material (RM) Sample outliers occur.

Outliers : Analysis Holding Time Compliance (Breaches)

- No Analysis Holding Time Outliers exist.

Outliers : Frequency of Quality Control Samples

- No Quality Control Sample Frequency Outliers occur.

Analysis Holding Time Compliance

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times, which are selected to meet known provincial and /or federal requirements. In the absence of regulatory hold times, ALS establishes recommendations based on guidelines published by organizations such as CCME, US EPA, APHA Standard Methods, ASTM, or Environment Canada (where available). Dates and holding times reported below represent the first dates of extraction or analysis. If subsequent tests or dilutions exceeded holding times, qualifiers are added (refer to COA).

If samples are identified below as having been analyzed or extracted outside of recommended holding times, measurement uncertainties may be increased, and this should be taken into consideration when interpreting results.

Where actual sampling date is not provided on the chain of custody, the date of receipt with time at 00:00 is used for calculation purposes.

Where only the sample date without time is provided on the chain of custody, the sampling date at 00:00 is used for calculation purposes.

Matrix: Soil/Solid

Legend & Qualifier Definitions

Rec. HT: ALS recommended hold time (see units).

Quality Control Parameter Frequency Compliance

The following report summarizes the frequency of laboratory QC samples analyzed within the analytical batches (QC lots) in which the submitted samples were processed. The actual frequency should be greater than or equal to the expected frequency.

Matrix: Soil/Solid

Evaluation: ✗ = QC frequency outside specification; ✓ = QC frequency within specification.

Quality Control Sample Type	Analytical Methods	Method	QC Lot #	Count		Frequency (%)	
				QC	Regular	Actual	Expected
Laboratory Duplicates (DUP)							
Boron-Hot Water Extractable by ICPOES		E487	784921	1	20	5.0	5.0
CCME fine/coarse Particle Size Analysis by wet sieve		E178	786020	1	6	16.6	5.0
CCME PHC - F1 by Headspace GC-FID		E581.F1	786352	1	11	9.0	5.0
CCME PHCs - F2-F4 by GC-FID (Low Level)		E601.SG-L	790280	1	8	12.5	5.0
Conductivity in Soil (1:2 Soil:Water Extraction) (Low Level)		E100-L	784920	1	20	5.0	5.0
Hexavalent Chromium (Cr VI) by IC		E532	784514	1	18	5.5	5.0
Mercury in Soil/Solid by CVAAS		E510	784917	1	20	5.0	5.0
Metals in Soil/Solid by CRC ICPMS		E440	784918	1	20	5.0	5.0
Moisture Content by Gravimetry		E144	784516	2	38	5.2	5.0
PAHs by Hex:Ace GC-MS		E641A	790279	1	5	20.0	5.0
PCB Aroclors by GC-MS		E687	786343	1	12	8.3	5.0
pH by Meter (1:2 Soil:0.01M CaCl ₂ Extraction) - As Received		E108A	784512	1	18	5.5	5.0
Sodium Adsorption Ratio (SAR) - 1:2 Soil:Water (Dry)		E484	784919	1	20	5.0	5.0
VOCs (Eastern Canada List) by Headspace GC-MS		E611D	786351	1	20	5.0	5.0
WAD Cyanide (0.01M NaOH Extraction)		E336A	784513	1	18	5.5	5.0
Laboratory Control Samples (LCS)							
Boron-Hot Water Extractable by ICPOES		E487	784921	2	20	10.0	10.0

Methodology References and Summaries

The analytical methods used by ALS are developed using internationally recognized reference methods (where available), such as those published by US EPA, APHA Standard Methods, ASTM, ISO, Environment Canada, BC MOE, and Ontario MOE. Reference methods may incorporate modifications to improve performance (indicated by "mod").

Analytical Methods	Method / Lab	Matrix	Method Reference	Method Descriptions
Conductivity in Soil (1:2 Soil:Water Extraction) (Low Level)	E100-L Waterloo - Environmental	Soil/Solid	CSSS Ch. 15 (mod)/APHA 2510 (mod)	Conductivity, also known as Electrical Conductivity (EC) or Specific Conductance, is measured by immersion of a conductivity cell with platinum electrodes into a soil sample that has been added in a defined ratio of soil to deionized water, then shaken well and allowed to settle. Conductance is measured in the fluid that is observed in the upper layer.
pH by Meter (1:2 Soil:0.01M CaCl ₂ Extraction) - As Received	E108A Waterloo - Environmental	Soil/Solid	MOEE E3137A	pH is determined by potentiometric measurement with a pH electrode, and is conducted at ambient laboratory temperature (normally 20 ± 5°C) and is carried out in accordance with procedures described in the Analytical Protocol (prescriptive method). A minimum 10g portion of the sample, as received, is extracted with 20mL of 0.01M calcium chloride solution by shaking for at least 30 minutes. The aqueous layer is separated from the soil by centrifuging, settling, or decanting and then analyzed using a pH meter and electrode.
Moisture Content by Gravimetry	E144 Waterloo - Environmental	Soil/Solid	CCME PHC in Soil - Tier 1	Moisture is measured gravimetrically by drying the sample at 105°C. Moisture content is calculated as the weight loss (due to water) divided by the wet weight of the sample, expressed as a percentage.
CCME fine/coarse Particle Size Analysis by wet sieve	E178 Saskatoon - Environmental	Soil/Solid	CCME Vol 4 Analytical Methods	An air-dried sample is reduced to < 2 mm size and mixed with a dispersing agent (sodium hexametaphosphate). The sample is washed through a 200 mesh (0.075 mm) sieve. The retained mass of sample is used to determine % sand fraction. If the percentage of sand is >50%, the soil is considered to be coarse textured soil. If the percentage of sand is <50%, the soil is considered to be fine textured.
WAD Cyanide (0.01M NaOH Extraction)	E336A Waterloo - Environmental	Soil/Solid	APHA 4500-CN I (mod)	Weak Acid Dissociable (WAD) cyanide is determined after extraction by Continuous Flow Analyzer (CFA) with in-line distillation followed by colourmetric analysis.
Metals in Soil/Solid by CRC ICPMS	E440 Waterloo - Environmental	Soil/Solid	EPA 6020B (mod)	This method is intended to liberate metals that may be environmentally available. Samples are dried, then sieved through a 2 mm sieve, and digested with HNO ₃ and HCl. Dependent on sample matrix, some metals may be only partially recovered, including Al, Ba, Be, Cr, Sr, Ti, Tl, V, W, and Zr. Silicate minerals are not solubilized. Volatile forms of sulfur (including sulfide) may not be captured, as they may be lost during sampling, storage, or digestion. This method does not adequately recover elemental sulfur, and is unsuitable for assessment of elemental sulfur standards or guidelines. Analysis is by Collision/Reaction Cell ICPMS.
Sodium Adsorption Ratio (SAR) - 1:2 Soil:Water (Dry)	E484 Waterloo - Environmental	Soil/Solid	SW846 6010C	A dried, disaggregated solid sample is extracted with deionized water, the aqueous extract is separated from the solid, acidified and then analyzed using a ICP/OES. The concentrations of Na, Ca and Mg are reported as per CALA requirements for calculated parameters. These individual parameters are not for comparison to any guideline.

Analytical Methods		Method / Lab	Matrix	Method Reference	Method Descriptions
Boron-Hot Water Extractable by ICPOES		E487 Waterloo - Environmental	Soil/Solid	HW EXTR, EPA 6010B	<p>A dried solid sample is extracted with calcium chloride, the sample undergoes a heating process. After cooling the sample is filtered and analyzed by ICP/OES.</p> <p>Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).</p>
Mercury in Soil/Solid by CVAAS		E510 Waterloo - Environmental	Soil/Solid	EPA 200.2/1631 Appendix (mod)	Samples are dried, then sieved through a 2 mm sieve, and digested with HNO ₃ and HCl, followed by CVAAS analysis.
Hexavalent Chromium (Cr VI) by IC		E532 Waterloo - Environmental	Soil/Solid	APHA 3500-CR C	Instrumental analysis is performed by ion chromatography with UV detection.
CCME PHC - F1 by Headspace GC-FID		E581.F1 Waterloo - Environmental	Soil/Solid	CCME PHC in Soil - Tier 1	CCME Fraction 1 (F1) is analyzed by static headspace GC-FID. Samples are prepared in headspace vials and are heated and agitated on the headspace autosampler, causing VOCs to partition between the aqueous phase and the headspace in accordance with Henry's law.
CCME PHCs - F2-F4 by GC-FID (Low Level)		E601.SG-L Waterloo - Environmental	Soil/Solid	CCME PHC in Soil - Tier 1	Sample extracts are subjected to in-situ silica gel treatment prior to analysis by GC-FID for CCME hydrocarbon fractions (F2-F4).
VOCs (Eastern Canada List) by Headspace GC-MS		E611D Waterloo - Environmental	Soil/Solid	EPA 8260D (mod)	Volatile Organic Compounds (VOCs) are analyzed by static headspace GC-MS. Samples are prepared in headspace vials and are heated and agitated on the headspace autosampler, causing VOCs to partition between the aqueous phase and the headspace in accordance with Henry's law.
PAHs by Hex.Ace GC-MS		E641A Waterloo - Environmental	Soil/Solid	EPA 8270E (mod)	Polycyclic Aromatic Hydrocarbons (PAHs) are extracted with hexane/acetone and analyzed by GC-MS. If reported, IACR (index of additive cancer risk, unitless) and B(a)P toxic potency equivalent (in soil concentration units) are calculated as per CCME PAH Soil Quality Guidelines fact sheet (2010) or ABT1.
PCB Aroclors by GC-MS		E687 Waterloo - Environmental	Soil/Solid	EPA 8270E (mod)	PCB Aroclors are analyzed by GC-MS
F1-BTEX		EC580 Waterloo - Environmental	Soil/Solid	CCME PHC in Soil - Tier 1	F1-BTEX is calculated as follows: F1-BTEX = F1 (C6-C10) minus benzene, toluene, ethylbenzene and xylenes (BTEX).
Sum F1 to F4 (C6-C50)		EC581 Waterloo - Environmental	Soil/Solid	CCME PHC in Soil - Tier 1	Hydrocarbons, total (C6-C50) is the sum of CCME Fractions F1(C6-C10), F2(C10-C16), F3(C16-C34), and F4(C34-C50). F4G-sg is not used within this calculation due to overlap with other fractions.

Analytical Methods				
	Method / Lab	Matrix	Method Reference	Method Descriptions
F2 to F3 minus PAH	EC600 Waterloo - Environmental	Soil/Solid	CCME PHC in Soil - Tier 1	F2-PAH = CCME Fraction 2 (C10-C16) minus Naphthalene F3-PAH = CCME Fraction 3 (C16-C34) minus select Polycyclic Aromatic Hydrocarbons (PAH) as per CCME Soil Tier 1
Preparation Methods				
Leach 1:2 Soil:Water for pH/EC	EP108 Waterloo - Environmental	Soil/Solid	BC WLAP METHOD: PH, ELECTROMETRIC, SOIL	The procedure involves mixing the dried (at <60°C) and sieved (No. 10 / 2mm) sample with deionized/distilled water at a 1:2 ratio of sediment to water.
Leach 1:2 Soil : 0.01CaCl ₂ - As Received for pH	EP108A Waterloo - Environmental	Soil/Solid	MOEE E3137A	A minimum 10g portion of the sample, as received, is extracted with 20mL of 0.01M calcium chloride solution by shaking for at least 30 minutes. The aqueous layer is separated from the soil by centrifuging, settling or decanting and then analyzed using a pH meter and electrode.
Cyanide Extraction for CFA (0.01M NaOH)	EP333A Waterloo - Environmental	Soil/Solid	ON MECP E3015 (mod)	Extraction for various cyanide analysis is by rotary extraction of the soil with 0.01M Sodium Hydroxide.
Digestion for Metals and Mercury	EP440 Waterloo - Environmental	Soil/Solid	EPA 200.2 (mod)	Samples are dried, then sieved through a 2 mm sieve, and digested with HNO ₃ and HCl. This method is intended to liberate metals that may be environmentally available.
Boron-Hot Water Extractable	EP487 Waterloo - Environmental	Soil/Solid	HW EXTR, EPA 6010B	A dried solid sample is extracted with weak calcium chloride, the sample undergoes a heating process. After cooling the sample is filtered and analyzed by ICP/OES. Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011)
Preparation of Hexavalent Chromium (Cr VI) for IC	EP532 Waterloo - Environmental	Soil/Solid	EPA 3060A	Field moist samples are digested with a sodium hydroxide/sodium carbonate solution as described in EPA 3060A.
VOCs Methanol Extraction for Headspace Analysis	EP581 Waterloo - Environmental	Soil/Solid	EPA 5035A (mod)	VOCs in samples are extracted with methanol. Extracts are then prepared in headspace vials and are heated and agitated on the headspace autosampler, causing VOCs to partition between the aqueous phase and the headspace in accordance with Henry's law.
PHCs and PAHs Hexane-Acetone Tumbler Extraction	EP601 Waterloo - Environmental	Soil/Solid	CCME PHC in Soil - Tier 1 (mod)	Samples are subsampled and Petroleum Hydrocarbons (PHC) and PAHs are extracted with 1:1 hexane:acetone using a rotary extractor.
Pesticides, PCB, PAH, and Neutral Extractable Chlorinated Hydrocarbons Extraction	EP660 Waterloo - Environmental	Soil/Solid	EPA 3570 (mod)	A homogenized subsample is extracted with organic solvents using a mechanical shaker.

<i>Preparation Methods</i>	<i>Method / Lab</i>	<i>Matrix</i>	<i>Method Reference</i>	<i>Method Descriptions</i>
Dry and Grind in Soil/Solid <60°C	EPP442 Waterloo - Environmental	Soil/Solid	Soil Sampling and Methods of Analysis, Carter 2008	After removal of any coarse fragments and reservation of wet subsamples a portion of homogenized sample is set in a tray and dried at less than 60°C until dry. The sample is then particle size reduced with an automated crusher or mortar and pestle, typically to <2 mm. Further size reduction may be needed for particular tests.

General Comments

The ALS Quality Control (QC) report is optionally provided to ALS clients upon request. ALS test methods include comprehensive QC checks with every analysis to ensure our high standards of quality are met. Each QC result has a known or expected target value, which is compared against predetermined Data Quality Objectives (DQOs) to provide confidence in the accuracy of associated test results. This report contains detailed results for all QC results applicable to this sample submission. Please refer to the ALS Quality Control Interpretation report (QCI) for applicable method references and methodology summaries.

Key :

Anonymous = Refers to samples which are not part of this work order, but which formed part of the QC process lot.

CAS Number = Chemical Abstracts Service number is a unique identifier assigned to discrete substances.

DQO = Data Quality Objective.

LOR = Limit of Reporting (detection limit).

RPD = Relative Percent Difference

= Indicates a QC result that did not meet the ALS DQO.

Workorder Comments

Holding times are displayed as "—" if no guidance exists from CCME, Canadian provinces, or broadly recognized international references.

Laboratory Duplicate (DUP) Report

A Laboratory Duplicate (DUP) is a randomly selected intralaboratory replicate sample. Laboratory Duplicates provide information regarding method precision and sample heterogeneity. ALS DQOs for Laboratory Duplicates are expressed as test-specific limits for Relative Percent Difference (RPD), or as an absolute difference limit of 2 times the LOR for low concentration duplicates within ~ 4-10 times the LOR (cut-off is test-specific).

Sub-Matrix: Soil/Solid

Method Blank (MB) Report

A Method Blank is an analyte-free matrix that undergoes sample processing identical to that carried out for test samples. Method Blank results are used to monitor and control for potential contamination from the laboratory environment and reagents. For most tests, the DQO for Method Blanks is for the result to be < LOR.

Laboratory Control Sample (LCS) Report

A Laboratory Control Sample (LCS) is an analyte-free matrix that has been fortified (spiked) with test analytes at known concentration and processed in an identical manner to test samples. LCS results are expressed as percent recovery, and are used to monitor and control test method accuracy and precision, independent of test sample matrix.

Sub-Matrix: Soil/Solid

Matrix Spike (MS) Report

A Matrix Spike (MS) is a randomly selected intra-laboratory replicate sample that has been fortified (spiked) with test analytes at known concentration, and processed in an identical manner to test samples. Matrix Spikes provide information regarding analyte recovery and potential matrix effects. MS DQO exceedances due to sample matrix may sometimes be unavoidable; in such cases, test results for the associated sample (or similar samples) may be subject to bias. ND – Recovery not determined, background level >= 1x spike level.

Sub-Matrix: Soil/Solid

Reference Material (RM) Report

A Reference Material (RM) is a homogenous material with known and well-established analyte concentrations. RMs are processed in an identical manner to test samples, and are used to monitor and control the accuracy and precision of a test method for a typical sample matrix. RM results are expressed as percent recovery of the target analyte concentration. RM targets may be certified target concentrations provided by the RM supplier, or may be ALS long-term mean values (for empirical test methods).

← Diesel/Jet Fuels →			

The CCME F2-F4 Hydrocarbon Distribution Report (HDR) is intended to assist you in characterizing hydrocarbon products that may be present in your sample.

The scale at the bottom of the chromatogram indicates the approximate retention times of common petroleum products and four n-alkane hydrocarbon marker compounds. Retention times may vary between samples, but general patterns and distributions will remain similar.

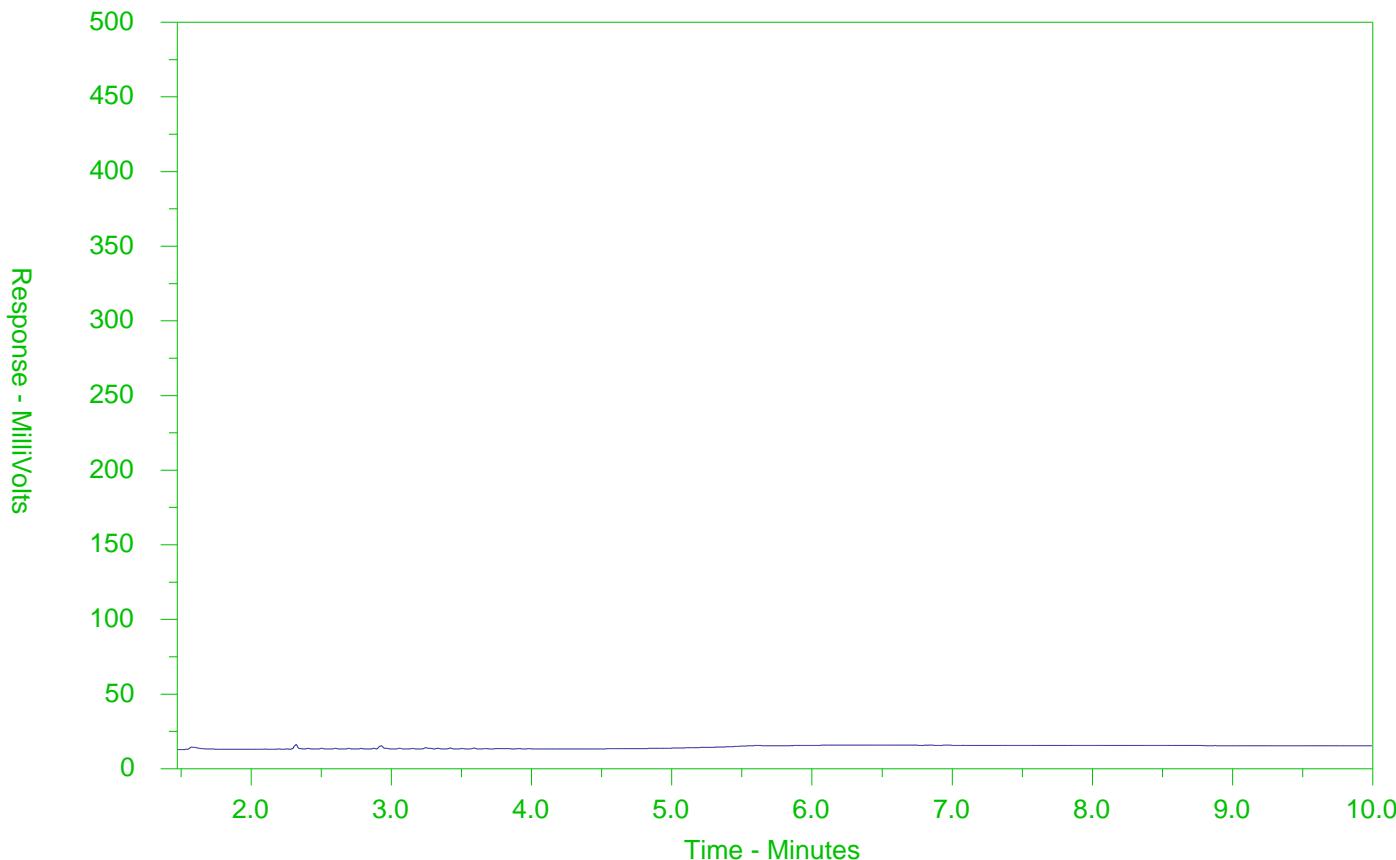

Peak heights in this report are a function of the sample concentration, the sample amount extracted, the sample dilution factor and the scale at the left.

Note: This chromatogram was produced using GC conditions that are specific to ALS Canada CCME F2-F4 method. Refer to the ALS Canada CCME F2-F4 Hydrocarbon Library for a collection of chromatograms from common reference samples (fuels, oils, etc.). The HDR Library can be found at www.alsglobal.com.

General Comments

The analytical methods used by ALS are developed using internationally recognized reference methods (where available), such as those published by US EPA, APHA Standard Methods, ASTM, ISO, Environment Canada, BC MOE, and Ontario MOE. Refer to the ALS Quality Control Interpretive report (QCI) for applicable references and methodology summaries. Reference methods may incorporate modifications to improve performance.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Please refer to Quality Control Interpretive report (QCI) for information regarding Holding Time compliance.

Key : CAS Number: Chemical Abstracts Services number is a unique identifier assigned to discrete substances
LOR: Limit of Reporting (detection limit).

Unit	Description
°C	degrees celsius
µg/L	micrograms per litre
m/sec	metres per second
mg/L	milligrams per litre
mm/sec	millimetres per second
none	none
pH units	pH units
sec	seconds

>: greater than.

<: less than.

Surrogate: An analyte that is similar in behavior to target analyte(s), but that does not occur naturally in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery.

Test results reported relate only to the samples as received by the laboratory.

UNLESS OTHERWISE STATED on SRN or QCI Report, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.

This report is automatically generated by the ALS LIMS (Laboratory Information Management System) through evaluation of Quality Control (QC) results and other QA parameters associated with this submission, and is intended to facilitate rapid data validation by auditors or reviewers. The report highlights any exceptions and outliers to ALS Data Quality Objectives, provides holding time details and exceptions, summarizes QC sample frequencies, and lists applicable methodology references and summaries.

Key

Anonymous: Refers to samples which are not part of this work order, but which formed part of the QC process lot.

CAS Number: Chemical Abstracts Service number is a unique identifier assigned to discrete substances.

DQO: Data Quality Objective.

LOR: Limit of Reporting (detection limit).

RPD: Relative Percent Difference.

Workorder Comments

Holding times are displayed as "----" if no guidance exists from CCME, Canadian provinces, or broadly recognized international references.

Summary of Outliers

Outliers : Quality Control Samples

- No Method Blank value outliers occur.
- No Duplicate outliers occur.
- No Laboratory Control Sample (LCS) outliers occur
- No Matrix Spike outliers occur.
- No Test sample Surrogate recovery outliers exist.

Outliers: Reference Material (RM) Samples

- No Reference Material (RM) Sample outliers occur.

Outliers : Analysis Holding Time Compliance (Breaches)

- No Analysis Holding Time Outliers exist.

Outliers : Frequency of Quality Control Samples

- No Quality Control Sample Frequency Outliers occur.

Analysis Holding Time Compliance

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times, which are selected to meet known provincial and /or federal requirements. In the absence of regulatory hold times, ALS establishes recommendations based on guidelines published by organizations such as CCME, US EPA, APHA Standard Methods, ASTM, or Environment Canada (where available). Dates and holding times reported below represent the first dates of extraction or analysis. If subsequent tests or dilutions exceeded holding times, qualifiers are added (refer to COA).

If samples are identified below as having been analyzed or extracted outside of recommended holding times, measurement uncertainties may be increased, and this should be taken into consideration when interpreting results.

Where actual sampling date is not provided on the chain of custody, the date of receipt with time at 00:00 is used for calculation purposes.

Where only the sample date without time is provided on the chain of custody, the sampling date at 00:00 is used for calculation purposes.

Matrix: Soil/Solid

Evaluation: ✗ = Holding time exceedance ; ✓ = Within Holding Time

Methodology References and Summaries

The analytical methods used by ALS are developed using internationally recognized reference methods (where available), such as those published by US EPA, APHA Standard Methods, ASTM, ISO, Environment Canada, BC MOE, and Ontario MOE. Reference methods may incorporate modifications to improve performance (indicated by "mod").

Analytical Methods	Method / Lab	Matrix	Method Reference	Method Descriptions
Ignitability (O. Reg. 347/558)	E209 Waterloo - Environmental	Soil/Solid	EPA 1030 (mod)	Ignitability is determined by placing a sample on a ceramic tile and formed into a test strip. One end of the strip is then heated with a torch. Any burn rate for non-metallic samples that exceeds 2.2 mm/sec is considered to have a positive result. For metals, a burn rate of more than 0.17 mm/sec is considered to have a positive result.
Fluoride by IC (TCLP)	E240.F Waterloo - Environmental	Soil/Solid	EPA 1311/EPA 300.1 (mod)	Inorganic anions are analyzed by obtaining an extract produced by the Toxicity Characteristic Leachate Procedure (TCLP) as per EPA 1311, which is then analyzed by Ion Chromatography with conductivity and/or UV detection.
Nitrite by IC (TCLP)	E240.NO2 Waterloo - Environmental	Soil/Solid	EPA 1311/EPA 300.1 (mod)	Inorganic anions are analyzed by obtaining an extract produced by the Toxicity Characteristic Leachate Procedure (TCLP) as per EPA 1311, which is then analyzed by Ion Chromatography with conductivity and/or UV detection.
Nitrate by IC (TCLP)	E240.NO3 Waterloo - Environmental	Soil/Solid	EPA 1311/EPA 300.1 (mod)	Inorganic anions are analyzed by obtaining an extract produced by the Toxicity Characteristic Leachate Procedure (TCLP) as per EPA 1311, which is then analyzed by Ion Chromatography with conductivity and/or UV detection.
WAD Cyanide (TCLP)	E337A Waterloo - Environmental	Soil/Solid	APHA 4500-CN I (mod)	Weak Acid Dissociable (WAD) cyanide is determined after extraction by Continuous Flow Analyzer (CFA) with in-line distillation followed by colourmetric analysis.
Metals by CRC ICPMS (TCLP)	E444 Waterloo - Environmental	Soil/Solid	EPA 1311/6020B (mod)	An extract produced by the Toxicity Characteristic Leachate Procedure (TCLP) as per EPA 1311 is analyzed by Collision/Reaction Cell ICPMS.
Mercury by CVAAS (TCLP)	E512 Waterloo - Environmental	Soil/Solid	SW 846 -1311/245.1 CVAA ON TCLP LEACHATE	An extract produced by the Toxicity Characteristic Leachate Procedure (TCLP) as per EPA 1311 is analyzed by CVAAS.
VOCs by Headspace GC-MS (TCLP)	E615B Waterloo - Environmental	Soil/Solid	EPA 8260D (mod)	Volatile Organic Compounds (VOCs) are analyzed by static headspace GC-MS. Samples are prepared in headspace vials and are heated and agitated on the headspace autosampler, causing VOCs to partition between the aqueous phase and the headspace in accordance with Henry's law.
PAHs by GC-MS (TCLP)	E644 Waterloo - Environmental	Soil/Solid	EPA 8270E (mod)	Polycyclic Aromatic Hydrocarbons (PAHs) are analyzed by GC-MS.
PCB Aroclors by GC-MS (TCLP)	E688A Waterloo - Environmental	Soil/Solid	EPA 8270E (mod)	PCB Aroclors are analyzed by GC-MS

Analytical Methods				
	Method / Lab	Matrix	Method Reference	Method Descriptions
Nitrate and Nitrite (as N), (TCLP) (Calculation)	EC240.N+N Waterloo - Environmental	Soil/Solid	EPA 300.0	Nitrate and Nitrite (as N) is a calculated parameter. Nitrate and Nitrite (as N) = Nitrite (as N) + Nitrate (as N).
Preparation Methods				
VOCs Preparation for Headspace Analysis (TCLP)	EP582 Waterloo - Environmental	Soil/Solid	EPA 5021A (mod)	Liquid obtained after the TCLP process is prepared in headspace vials and are heated and agitated on the headspace autosampler, causing VOCs to partition between the aqueous phase and the headspace in accordance with Henry's law.
PHCs and PAHs Extraction (TCLP)	EP602 Waterloo - Environmental	Soil/Solid	EPA 3511 (mod)	Petroleum Hydrocarbons (PHCs) and Polycyclic Aromatic Hydrocarbons (PAHs) are extracted using a hexane liquid-liquid extraction.
Pesticides, PCB, and Neutral Extractable Chlorinated Hydrocarbons Extraction (TCLP)	EP661 Waterloo - Environmental	Soil/Solid	EPA 3511 (mod)	Samples are extracted from aqueous sample using an organic solvent liquid-liquid extraction.
TCLP Leachate Preparation (Metals, Inorganics, and SVOCs)	EPP444 Waterloo - Environmental	Soil/Solid	EPA 1311	Preparation of a Toxicity Characteristic Leaching Procedure (TCLP) solid sample involves particle size reduction, homogenization, then determination of appropriate extraction fluid. A measured portion of fresh subsample is placed in an extraction bottle with the appropriate extraction fluid then tumbled in a rotary extractor for 18+- 2 hours at 23 +- 2 C. The liquid leachate is filtered to separate from solids then bottled and prepared for analytical tests.
TCLP Leachate Preparation (VOCs)	EPP582 Waterloo - Environmental	Soil/Solid	EPA 1311	An extract produced by the Toxicity Characteristic Leaching Procedure (TCLP) as per EPA 1311.

General Comments

The ALS Quality Control (QC) report is optionally provided to ALS clients upon request. ALS test methods include comprehensive QC checks with every analysis to ensure our high standards of quality are met. Each QC result has a known or expected target value, which is compared against predetermined Data Quality Objectives (DQOs) to provide confidence in the accuracy of associated test results. This report contains detailed results for all QC results applicable to this sample submission. Please refer to the ALS Quality Control Interpretation report (QCI) for applicable method references and methodology summaries.

Key :

Anonymous = Refers to samples which are not part of this work order, but which formed part of the QC process lot.

CAS Number = Chemical Abstracts Service number is a unique identifier assigned to discrete substances.

DQO = Data Quality Objective.

LOR = Limit of Reporting (detection limit).

RPD = Relative Percent Difference

= Indicates a QC result that did not meet the ALS DQO.

Workorder Comments

Holding times are displayed as "—" if no guidance exists from CCME, Canadian provinces, or broadly recognized international references.

Laboratory Duplicate (DUP) Report

A Laboratory Duplicate (DUP) is a randomly selected intralaboratory replicate sample. Laboratory Duplicates provide information regarding method precision and sample heterogeneity. ALS DQOs for Laboratory Duplicates are expressed as test-specific limits for Relative Percent Difference (RPD), or as an absolute difference limit of 2 times the LOR for low concentration duplicates within ~ 4-10 times the LOR (cut-off is test-specific).

Sub-Matrix: Soil/Solid

Method Blank (MB) Report

A Method Blank is an analyte-free matrix that undergoes sample processing identical to that carried out for test samples. Method Blank results are used to monitor and control for potential contamination from the laboratory environment and reagents. For most tests, the DQO for Method Blanks is for the result to be < LOR.

Laboratory Control Sample (LCS) Report

A Laboratory Control Sample (LCS) is an analyte-free matrix that has been fortified (spiked) with test analytes at known concentration and processed in an identical manner to test samples. LCS results are expressed as percent recovery, and are used to monitor and control test method accuracy and precision, independent of test sample matrix.

Sub-Matrix: Soil/Solid

Matrix Spike (MS) Report

A Matrix Spike (MS) is a randomly selected intra-laboratory replicate sample that has been fortified (spiked) with test analytes at known concentration, and processed in an identical manner to test samples. Matrix Spikes provide information regarding analyte recovery and potential matrix effects. MS DQO exceedances due to sample matrix may sometimes be unavoidable; in such cases, test results for the associated sample (or similar samples) may be subject to bias. ND – Recovery not determined, background level >= 1x spike level.

Sub-Matrix: Soil/Solid

Matrix Spike (MS) Report										
Laboratory sample ID	Client sample ID	Analyte	CAS Number	Method	Spike		Recovery (%)	Recovery Limits (%)
